| 9.2 Are there any consequences if I stop my integration with QuickBooks? ..... | 21 |
| 9.3 Should I contact Simon to stop my integration with QuickBooks? .....       | 21 |

## 1. Goal of the integration

### 1.1 Simply manage your data

One of the many advantages of using the integration between Simple-Simon and QuickBooks is that you can control your data in one spot. Once the integration between Simple-Simon and QuickBooks is set, QuickBooks becomes the main ERP system. Customers and products should be added to QuickBooks. Simple-Simon automatically updates according to the mutations that are done in QuickBooks. Add your customers and products to QuickBooks. Simon will copy these and you can start creating and planning your work orders!

### 1.2 Less mistakes, quicker billing

Controlling your data in spot ensures you make less mistakes while billing to your customers. Create a work order in Simon, schedule the work order for yourself or your co-worker and register products and hours. Once the work order is reported finished and archived, it is sent to QuickBooks as an invoice within 5 minutes. Check, edit and confirm that the invoice is correct and send the bill to your customer. The integration between Simple-Simon and QuickBooks creates less mistakes and makes your billing quicker.

### 1.3 Advantages of the integration

The integration between QuickBooks and Simple-Simon comes with plenty of advantages, as you:

1. Can send your bill **quicker** and you make **less mistakes**.
2. Simon automatically acquires all **your customers and products and services** from QuickBooks and this is directly available in Simon.
3. Your work order is finished in Simple-Simon, the archived work order is sent back to **QuickBooks** as an **invoice with the status open**.
4. Is your work order ready? Within **5 minutes** the bill can be send to your customer.
5. It makes processing work order effortless, directly save **time** and **money**!
6. The integration **can be easily created by yourself**, ready within 5 minutes.

## **2. Principles of the integration**

### **2.1 QuickBooks is the starting point for your customers, products and services**

Once the integration between Simple-Simon and QuickBooks is set, QuickBooks becomes the main ERP system for your products and services and customers. Simple-Simon automatically updates once mutations are done in QuickBooks. Adding customers or products and services (products in Simon) and editing them, should be done in QuickBooks. Customers or products added to Simon cannot be forwarded to QuickBooks. In order to prevent incorrect billing, customers and products added to Simon will therefore be automatically removed from Simon. This is done a few times a week.

### **2.2 Create and schedule a work order and register hours**

You can start creating work orders once all your customer and products are transferred to Simple-Simon. Creating the work order is done in Simple-Simon. Create a work order, schedule the work order for yourself or your co-worker and register hours or products. You can also add own forms that ask specific questions about the job done.

### **2.3 Customer added to the work order should match the customer in QuickBooks**

Every customer that is added to a work order, should be a customer that is transferred from QuickBooks to Simple-Simon. When you archive the work order in Simon, an invoice with the status open is created for that particular customer in QuickBooks. Your customer database is available for your office and in the field employees. They can select the correct customer. It is not possible to send the work order to QuickBooks if no customer is registered on the work order. The integration will send an error notification as it not possible to create an invoice in QuickBooks without selecting a customer.

### **2.4 Archiving the work order in Simon creates an invoice in QuickBooks**

You can send your work order to QuickBooks by archiving the work order in Simon. In order to do so, the work order needs to be reported as finished. Check the finished work order, edit if necessary and archive the work order. Within a few minutes the work order becomes an invoice in QuickBooks. The invoice is added to the selected customer. That way it is easy to control your work orders and invoices. The integration logging allows you to precisely follow this process. For example, if no customer is added to the work order then no invoice can be created in QuickBooks. The integration logging shows you what might be wrong and how you can fix this.

### **2.5 Removing customer should be done in QuickBooks, Simon updates automatically**

Removing or inactivating customers should be done in QuickBooks. QuickBooks is the main ERP system and Simon updates accordingly. A few times a week Simon checks and removes customers that are removed in QuickBooks as well. You do not need to remove these customers yourself; Simon does this automatically.

### 3. Exchanges in the integration

#### 3.1 Retrieving products from QuickBooks

Once the integration between Simple-Simon and QuickBooks is set, QuickBooks becomes the main ERP system for your products and services (products in Simon). Every time you add a product to QuickBooks, the product is placed in Simon within minutes. Simple-Simon automatically updates once mutations are done in QuickBooks. Your product database is available for your office and in the field employees. They can select the correct product. Adding products and services (products) and editing them, should be done in QuickBooks. Products added to Simon cannot be forwarded to QuickBooks. In order to prevent incorrect billing, products added to Simon will therefore be automatically removed from Simon. This is done a few times a week.

#### 3.2 Retrieving customers from QuickBooks

Once the integration between Simple-Simon and QuickBooks is set, QuickBooks becomes the main ERP system for your customers. Every time you add a customer to QuickBooks, the customer is placed in Simon within minutes. Simple-Simon automatically updates once mutations are done in QuickBooks. Your customer database is available for your office and in the field employees. They can select the correct customer. Adding customers and editing them, should be done in QuickBooks. Customers added to Simon cannot be forwarded to QuickBooks. In order to prevent incorrect billing, customers added to Simon will therefore be automatically removed from Simon. This is done a few times a week.

#### 3.3 Work addresses are retrieved from QuickBooks, but may be added in Simon

The standard invoice address is automatically retrieved from QuickBooks and becomes the customer address in Simon. Additionally, a work address is created based on the invoice address. A work address is the location where the job should be done. Billing and/or shipping addresses created in QuickBooks are also added to Simon as work addresses. You are also allowed to add work addresses in Simon. Just make sure you match the work address to the correct customer (which is retrieved from QuickBooks). You can create as many work addresses in Simon as you wish, if they are matched to a customer.

#### 3.4 Archived work orders are sent to QuickBooks

Sending work orders to QuickBooks is done by archiving them in Simple-Simon. Only a work order that is marked as finished can be archived. Once you archive the work order, within minutes it is placed in QuickBooks as an invoice. You can archive the work order by selecting 'Archive' in the work order overview. This button is only available if the work order is **reported** as **finished**. The work order is sent to QuickBooks as an invoice with the status open and placed at the correct customer. Your co-workers in the office can check the work order before sending it to QuickBooks. That is how you easily manage and control your work orders and bills.

#### **3.4.1 How are the registered travel times in the work order sent to QuickBooks?**

The registered travel times in the work order can be sent to QuickBooks as an invoice line. You can determine which product should be used to book the times in QuickBooks. You can determine this by changing the settings of the integration. More information about the integration's settings can be found in chapter 5.2 "How do I make sure Simon sends my registered travel time to QuickBooks?". An example: let's say you registered 15 minutes of travel time on the work order in Simon. In QuickBooks the travel time is registered as 0,25 x "your chosen product". In QuickBooks you can edit the quantity, price or product before you send the bill to your customer. It is also possible to not register the travel time in QuickBooks. Do you want to know more about this option? Take a look at the settings in chapter 5.2.

#### **3.4.2 How are the registered work times in the work order sent to QuickBooks?**

The registered work times in the work order can be sent to QuickBooks as an invoice line. You can determine which product should be used to book the times in QuickBooks. You can determine this by changing the settings of the integration. More information about the integration's settings can be found in chapter 5.3 "How do I make sure Simon sends my registered work time to QuickBooks?". An example let's say you registered 15 minutes of work time on the work order in Simon. In QuickBooks the work time is registered as 0,25 x "your chosen product". In QuickBooks you can edit the quantity, price or product before you send the bill to your customer. It is also possible to not register the work time in QuickBooks. Do you want to know more about this? Take a look at the settings in chapter 5.3.

#### **3.4.3 How are the registered products transferred to QuickBooks's invoice?**

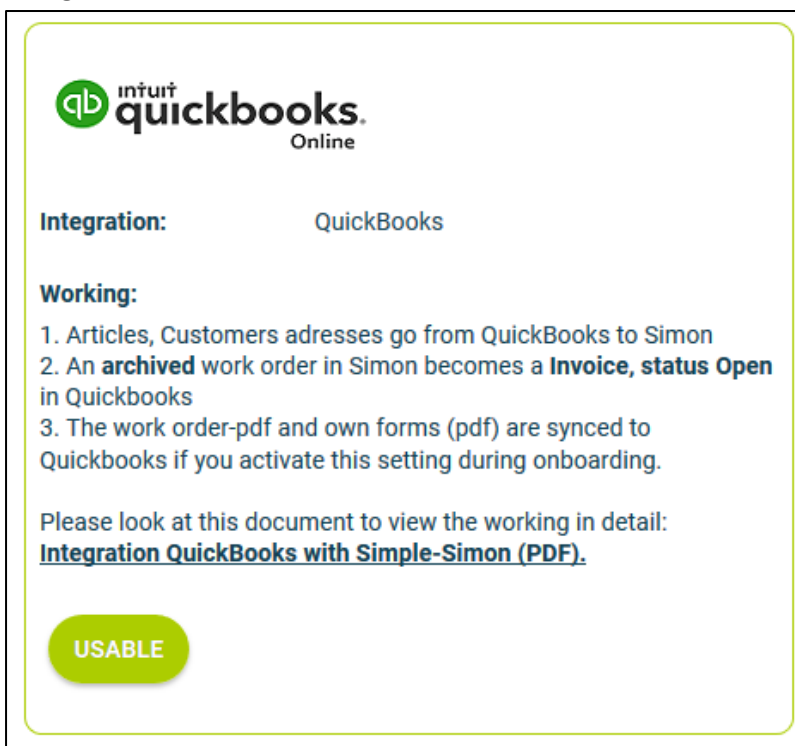

The registered products in the work order are transferred to QuickBooks as an invoice line. Here you can edit the price, quantity of product, before you send the bill to your customer. Simon automatically selects the correct product in QuickBooks, as the product database is based on QuickBooks's products and services.

## 4. Activating the integration

There are several options available to make sure the integration works as you wish. Change the settings so that the integration matches perfectly with your workflow. In order to activate the integration, QuickBooks and Simon should be connected. This chapter explains how creating the connection works.

### 4.1 Where should I start when creating the integration?

Make sure you are logged into Simple-Simon and head over to 'Integrations'. Select 'Activate integration' and select 'Usable'.

**qb** intuit **quickbooks.**  
Online

**Integration:** QuickBooks

**Working:**

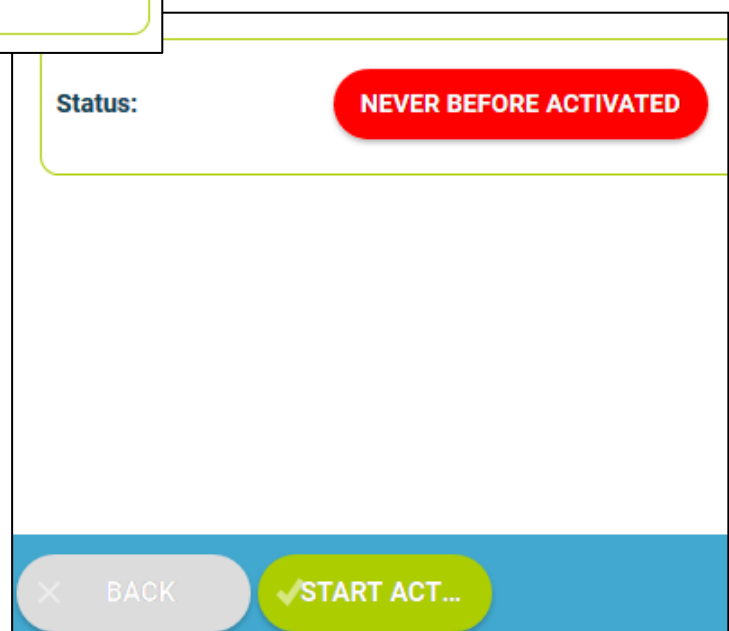

- 1. Articles, Customers addresses go from QuickBooks to Simon
- 2. An **archived** work order in Simon becomes a **Invoice, status Open** in Quickbooks
- 3. The work order-pdf and own forms (pdf) are synced to Quickbooks if you activate this setting during onboarding.

Please look at this document to view the working in detail:  
[Integration QuickBooks with Simple-Simon \(PDF\).](#)

**USABLE**

### 4.2 How do I activate the integration?

Select the green button 'Start activation'. We then shortly explain how the integration works. Creating the integration starts by erasing existing Simon data. Chapter 4.3 "Why should I erase my database before I can activate the integration?" explains why and how this can be done.

**Status:** **NEVER BEFORE ACTIVATED**

**BACK** **START ACT...**

#### 4.3 Why should I erase my database before I can activate the integration?

It is mandatory to erase your database in Simple-Simon if you want to start the integration with QuickBooks. Once the integration between Simple-Simon and QuickBooks is set, QuickBooks becomes the main ERP system. Customers and products should be added to QuickBooks. Simple-Simon automatically updates according to the mutations that are done in QuickBooks. Your database in Simon therefore should be emptied first, so that you can begin with a fresh start. Select 'Clear Simon data' to erase the data. Simon then shows you which parts should be erased.

If you are restarting the integration (after deactivating it), you can choose which parts of the database should be erased. Select which parts of the database you want to remove and which should remain.

Integration: QuickBooks

**Working:**

1. Articles, Customers addresses go from QuickBooks to Simon
2. An **archived** work order in Simon becomes a **Invoice, status Open** in Quickbooks
3. The work order-pdf and own forms (pdf) are synced to Quickbooks if you activate this setting during onboarding.

Please look at this document to view the working in detail: [Integration QuickBooks with Simple-Simon \(PDF\)](#).

| <input checked="" type="checkbox"/>  | Article         | 12     | 2019-09-10 11:24 AM |
| <input checked="" type="checkbox"/>  | Work Order      | 31     | 2019-09-10 11:24 AM |
| <input checked="" type="checkbox"/>  | Work Address    | 16     | 2019-09-10 11:24 AM |
| <input checked="" type="checkbox"/>  | Customer        | 5      | 2019-09-10 11:24 AM |
| <input checked="" type="checkbox"/>  | Equipment       | 0      | –                   |
| <input checked="" type="checkbox"/>  | Contact Persons | 10     | 2019-09-10 11:24 AM |

It is possible to start the integration as soon as you have erased the Simon database. You can do so by selecting 'Connect!'.

| FOLLOW THE STEPS BELOW  |  |
|---|--|
| <input checked="" type="checkbox"/> Mandatory clearing of Simon Data! | <input checked="" type="checkbox"/> CLEAR SIMON DATA |
| <input type="checkbox"/> Make Connection with Simon                   | <input checked="" type="checkbox"/> CONNECT!         |
| <input type="checkbox"/> Settings                                     |  |

The next step is to log into QuickBooks. If the credentials are correct, you are sent back to the 'Settings' page in Simon.

The image shows the Intuit Sign In page. At the top, the Intuit logo is displayed, followed by logos for TurboTax, QuickBooks, and Mint. The main heading is "Sign In". Below this, a subheading states: "One account for everything Intuit, including QuickBooks. [Learn more](#)". There are two input fields: "Email or user ID" and "Password". Below the password field is a checkbox labeled "Remember me". A blue "Sign In" button with a lock icon is positioned below the checkbox. Under the button, a line of text reads: "By clicking Sign In, you agree to our [Terms](#) and have read and acknowledge our [Privacy Statement](#)". At the bottom of the form, there are two links: "I forgot my user ID or password" and "New to Intuit? [Create an account](#)". At the very bottom, a small footer mentions "Invisible reCAPTCHA by Google [Privacy Policy](#) and [Terms of Use](#)".

#### 4.4 Where can I deactivate my integration?

If wanted, you can immediately deactivate your integration. Once you deactivate the integration, it will stop automatically. You do not need to contact Simple-Simon to deactivate your integration. The moment you deactivate your integration, QuickBooks will no longer transfer customers and products to Simon and you cannot send work orders to QuickBooks either. Of course, you can restart the integration at any moment. The moment you restart the integration, Simon will start updating the customer and products again and it is possible to send work orders to QuickBooks as well.

## 5. Settings integration

### 5.1 What should I do with the settings of the integration?

You can use the settings to determine how the integration should work. The settings can be selected after you have erased the Simon data and created a connection between Simon and QuickBooks. Select 'Settings' to manage the settings. When using the integration you agree with the terms and conditions of the integration.

| FOLLOW THE STEPS BELOW   |  |
|--|--|
| <input checked="" type="checkbox"/> <b>Mandatory</b> clearing of Simon Data! | <input checked="" type="checkbox"/> CLEAR SIMON DATA |
| <input checked="" type="checkbox"/> Make Connection with Simon               |  |
| <input type="checkbox"/> Settings  | <input checked="" type="checkbox"/> SETTINGS         |

**TERMS OF USAGE** ✕

In order to use this integration, please agree to the corresponding terms.

**Please read the terms to use this integration (PDF).**

☒ I agree to the terms to use this integration

✕ BACK ☒ PROCEED

### 5.2 How do I send my registered travel time to QuickBooks?

If wanted, you can send the, in Simon registered, travel time to QuickBooks. The product you choose here is the product which is selected in QuickBooks when sending the travel time to QuickBooks. For example, if you register two hours of travel time in Simon, two times the product is registered in QuickBooks. Select 'Check' to validate the product in QuickBooks.

▼

| <input type="checkbox"/> | NAME ▲  | ITEM/SERVICE CODE |
|--------------------------|---|-------------------|
|                          | Time  |                   |
| <input type="checkbox"/> |  Travel time | 00010             |

**On which article in your accounting software you want to register Simons travel time?** ℹ

✎

Travel time

### 5.3 How do I send my registered work time to QuickBooks?

If wanted, you can send the, in Simon registered, work time to QuickBooks. The product you choose here is the product which is selected in QuickBooks when sending the work time to QuickBooks. For example, if you register two hours of work time in Simon, two times the product is registered in QuickBooks. Select 'Check' to validate the product in QuickBooks.

| <input type="checkbox"/> | NAME ▲  |
|--------------------------|---|
|                          | Time  |
| <input type="checkbox"/> |  Work time |

**On which article in your accounting software you want to register Simons work time?** 

Work time

### 5.4 Can I add a default product to my invoice in QuickBooks?

If wanted, you can automatically add a default product to your invoice in QuickBooks. This product is automatically placed on your invoice once you send the work order from Simon to QuickBooks. An example of a default product is a 'Call-out fee'. If you want the call-out fee to be automatically added to your invoice, set it as a default product here. Select 'check' to verify the product.

| <input type="checkbox"/> | NAME ▲   |
|--------------------------|--|
|                          | Time   |
| <input type="checkbox"/> |  Call-out fee |

**Automatically add a Default Article?** 

**Article number in your accounting software** 

Call-out fee

### 5.5 Can I choose which type of products and services are synced to Simon?

This setting allows you to choose which products and services should be synced from QuickBooks to Simon as products. You can choose to sync the stock, non-stock or both types of products and services.

**Type of articles which are suppose to be synced to Simon**

☐ Stock

☐ Non Stock

☒ Both

### 5.6 Can I send my product code from QuickBooks to Simon?

In QuickBooks an product code does not have to be unique, whereas in Simon it must be unique. This setting allows you to add the product code from QuickBooks to the products in Simon. That way you can easily search within the products in Simon.

**Add article code to Simons article description?**

Yes

### 5.7 How do I make sure that the description of the work done is placed in the invoice?

If you want the description of the work done to be placed in the invoice, you can select to do so here. This might be convenient as the invoice then shows which work has specifically been done during the job. The description of the work done is then placed on the first line of the invoice.

|   | # | PRODUCT/SERVICE | DESCRIPTION                |
|---|---|-----------------|----------------------------|
| ⋮ | 1 |                 | Yearly maintenance please! |

**Do you want to send as first line, Simons Work description to your accounting software?** ⓘ

Yes

### 5.8 Can I prevent work orders from being send to QuickBooks?

When you archive the finished work order, it is sent to QuickBooks as an invoice with the status open. If you do not want all work orders to be send to QuickBooks, you can prevent this by entering a filter word. For example, if you do not want the guarantee jobs to be billed, you can add 'Guarantee' as a filter word. All work orders which have 'Guarantee' in the description of the work order, will not be send to QuickBooks. If you leave this setting empty, all work orders will be send to QuickBooks.

**Provide an optional filterword, for Simons Work orders you DO NOT want to send to your accounting software.** 

Guarantee

### 5.9 Can I determine which tax setting will be used to create the invoice?

Here you can choose whether the invoice in QuickBooks (the work order sent from Simon) should have the tax included, excluded or no tax added.

**Choose setting tax for invoice subtotal**

☐ No Tax

☒ Tax Excluded

☐ Tax Included

### 5.10 Can I send my work order and own form PDF to QuickBooks?

If wanted, you can send the work order PDF and the own form PDF to QuickBooks. The PDFs are then placed in the attachments of the invoice. This makes searching for the correct information easier and quicker.

 **Attachments**    Maximum size: 25MB

☐ **Attach to email**

WorkOrder-00001-20190903101449.pdf (137.0 kb) ×

Drag/Drop files here or click the icon

Show existing

**Which documents from Simon you want to have in your accounting software?**

- ☒ Only work order PDF
- ☐ Work order PDF and own form PDF
- ☐ Only Own-forms (PDF)
- ☐ Nothing

### 5.11 Which addresses can I send from QuickBooks to Simon?

You can choose to send the billing addresses, shipping addresses or both to Simon. Regardless of your choice, each address from QuickBooks is added in Simon as a work address. You are also allowed to add additional work addresses in Simon. Just make sure they are attached to a customer that is transferred from QuickBooks to Simon.

**Which addresses do you want as working addresses in Simon?**

- ☐ Billing address
- ☐ Billing address and shipping address
- ☒ Shipping address

### 5.12 Can I place additional information from Simon in the tracking number of QuickBooks?

If wanted, we can add additional information in the tracking number on the invoice in QuickBooks. You can send the work order number, customer reference or both to QuickBooks. Of course you can also select to send no information.

Tracking no.

00001

**What do you want to save in Invoice Shipping Track No.**

- ☒ Simons work order number
- ☐ Simons customer reference
- ☐ Simons work order number and Simons customer reference
- ☐ Nothing

### 5.13 Can I send estimates from QuickBooks to Simon?

It is possible to send an estimate from QuickBooks to Simon. Once you send the estimate to Simon, a work order is created for that estimate. The status of the estimate in QuickBooks needs to be 'Accepted' in order to send the estimate to Simon. If you want to send estimates to Simon, select 'Yes' in this setting.

**Get Estimates from your accounting software to Simon?**  

Yes

#### 5.13.1 Can I determine which estimates I send from QuickBooks to Simon?

This setting allows you to only retrieve estimates containing a filter word in the estimate description. For example, you could use 'WO' (short for work order) to determine which estimates may be send to Simon. Any estimate description which contains 'WO' is send to Simon. If you leave this setting empty, all estimates will be sent to Simon.

**Which Filterword needs to be present to sync the Estimate to Simon?**  

wo

#### 5.13.2 Can I add my products and service from the estimate to my work order in Simon?

If you want, you can automatically add the products and service from your estimate to your work order in Simon. The products will be placed in the work order as used products. If you want to this to be done, select 'Yes' at this setting.

**Synchronize Estimate-lines as Used-Articles to Simon?**  

Yes

## 6. Edit settings integration

### 6.1 How can I edit the settings of my integration?

Once you have set the integration with QuickBooks, you can edit the settings of the integration. The status of the integration shows you whether it is active or not. By selecting 'Change' you can edit the settings of the integration. The next page will show you the settings button. Here you can edit the integration according to your own wishes. If you edit one setting, all other settings need to be checked as well. Press 'Check' to check each setting. Save the settings and the integration has been edited. The changes in the integration will be applicable from the moment you have edited the integration. This will not be done in retrospective.

The screenshot shows the integration settings interface. At the top, the status is 'ACTIVE' in a green button. Below this, there are two date range fields: 'Start' (2019-09-02 02:33 AM) and 'End' (1899-12-31 03:00 PM). A table below shows the 'Simon Update' and 'Integration Update' for various items. At the bottom, there are three buttons: 'BACK' (grey), 'CHANGE' (green), and 'DE-ACTIVATE' (red).

| Table               | Simon Update        | Integration Update  |
|---------------------|---------------------|---------------------|
| Article             | 1899-12-31 03:00 PM | 2019-09-10 05:37 AM |
| Customer            | 1899-12-31 03:00 PM | 2019-09-04 04:29 AM |
| Work address        | 1899-12-31 03:00 PM | 1899-12-31 03:00 PM |
| WorkOrder_Quotes    | 1899-12-31 03:00 PM | 2019-09-13 12:32 AM |
| WorkOrder_Estimates | 1899-12-31 03:00 PM | 2019-09-04 04:51 AM |
| Work order          | 2019-09-09 12:49 AM | 1899-12-31 03:00 PM |
| WorkOrderPDF        | 2019-09-02 03:30 AM | 1899-12-31 03:00 PM |
| UsedItem            | 1899-12-31 03:00 PM | 2019-09-13 12:32 AM |

### 6.2 Are there any consequences if I edit the interface?

The integration works according to the choices you make in the settings page. It is only possible to edit the integration's settings if this is in line with information from QuickBooks. For example, if an product does not exist in QuickBooks, Simon will send an error notification stating this. It is your own responsibility that the integration information is correct.

### 6.3 When are changes to the integration activated?

The moment you alter the integration, the changes are saved and activated. This will not be done in retrospective.

### 6.4 Can I undo my settings?

You can edit the settings of the integration at any given moment. The moment you alter the integration, the changes are saved and activated. This will not be done in retrospective. If needed, you can also completely deactivate the integration. The moment you stop the integration, it will be deactivated completely. You do not need to contact Simple-Simon to do so. The moment you deactivate the integration, QuickBooks will no longer send customer and products to Simon and it also not possible to send a work order to QuickBooks. Of course, you can activate your integration again.

## **7. How does the integration work?**

### **7.1 Why should I empty my database before starting the integration?**

It is mandatory to erase your database in Simple-Simon if you want to start the integration with QuickBooks. Once the integration between Simple-Simon and QuickBooks is set, QuickBooks becomes the main ERP system. Customers and products should be added to QuickBooks. Simple-Simon automatically updates according to the mutations that are done in QuickBooks. Your database in Simon therefore should be emptied first, so that you can begin with a fresh start. Select 'Clear Simon data' to erase the data. Simon then shows you which parts should be erased.

If you are restarting the integration (after de-activating it), you can choose which parts of the database should be erased. Select which parts of the database you want to delete and which should remain.

### **7.2 How long does it take for QuickBooks and Simon to synchronize?**

The synchronization between QuickBooks and Simon is done around every 5 minutes. This might be a bit more or a bit less, depending on how many people are using the integration. You can also view the highest mutation date. This shows the latest mutation you did in QuickBooks (or Simon), that influences Simon (or vice versa). If you want to view the mutation date, go to 'Integrations', 'Logging' and look at the green icon.

### **7.3 How often is a clean-up done in Simon?**

Products or customers removed in QuickBooks, are automatically removed in Simon as well. Simon runs a clean-up, a few times a week, in which these customers and products are automatically removed. You do not need to remove customers or products yourself; Simon does this for you.

### **7.4 Why does it take a while (the first time) to retrieve the data from QuickBooks?**

It might take a while to set the integration between Simple-Simon and QuickBooks. The first time Simon must import all customers and products from QuickBooks. How long this takes exactly is depended on the size of your database in QuickBooks.

## 8. Logging – notifications integration

### 8.1 My integration with QuickBooks does not work, what should I do?

If (a part of) your integration does not work, a notification is created. You can view these notifications at 'Integrations' and then 'Logging'. Here you can find all notifications regarding your integration. Each column tells you a bit about the notification. For example, the 'Table' column tells you whether the notification is about a work order, customer, work address or product. Furthermore, the column 'Message' shows you the exact notification. If something needs to be done about the notification, you can view what you should do in 'Action to take'. An example of a notification is when no customer is attached to the customer. You cannot send a work order to QuickBooks without attaching a customer to the work order, as QuickBooks needs to know for which customer the invoice can be created.

| TABLE   |  | MESSAGE                                     | ACTION TO TAKE       |
|---|--|---|----------------------|
|  | <br>135 | <input type="text"/>                        | <input type="text"/> |
| <input type="radio"/>   | UsedItem   | New UsedItem Inserted to Simon Successfully | No Action Needed     |
| <input type="radio"/>   | Work order   | New WorkOrder Insered to Simon Successfully | No Action Needed     |
| <input type="radio"/>   | None   |   |                      |
| <input type="radio"/>   | Work address   |   |                      |
| <input type="radio"/>   | Customer   |   |                      |

### 8.2 What is the meaning of the various notifications?

Depending on the type of notification, Simon will either show an info, warning or error message. Regardless of the type of notification, Simon will show the message in the "Message" column. You can choose to only show warning or errors. If you want to view all notifications that require a solution, select errors. If a solution is required, this is shown in the column 'Action to take'.

| MESSAGE                                     |
|---|
| <input type="text"/>                        |
| New UsedItem Inserted to Simon Successfully |
| New WorkOrder Insered to Simon Successfully |

### 8.3 Notification .... is shown in my QuickBooks integration, what should I do?

If you receive a notification that requires a solution, this will be shown in the column 'Action to take'. This column also explains what the solution should be.

| MESSAGE  | ACTION TO TAKE  |
|--|---|
|  |   |
| Work Order does not have a Customer in your accounting software! | Please De-Archive WO , attach ERP Customer which is Active and not Removed in ERP |

### 8.4 What is the meaning of the various colours in the notifications?

The colour changes depending on the type of the message. An 'info' notification is shown in white or blue. 'Warnings' are shown in yellow and 'errors' are shown in red. That way it is easy to view what is going on in the integration and if a solution is required.

| KIND OF MESSAGE |
|-----------------|
|                 |
| Error           |
| Info            |

## 9. Stop the integration

### 9.1 Where can I stop the integration with QuickBooks?

You can stop the integration with QuickBooks by going to 'Integrations' → 'Activate integration' → 'QuickBooks' → 'Active' → 'Deactivate'. Simon will then ask whether you really want to deactivate the integration. The integration can only be used later by reactivating it.

### 9.2 Are there any consequences if I stop my integration with QuickBooks?

No more customers and products will be transferred from QuickBooks and no work orders will be send to QuickBooks, from the moment you deactivate the integration. Of course, you can always reactivate the integration. The customers and products will be transferred to Simon and work orders will be send to QuickBooks from that moment on.

### 9.3 Should I contact Simon to stop my integration with QuickBooks?

You can deactivate the integration whenever you want. Once you deactivate the integration, it stops automatically. You do not need to contact Simon to do this.
